

Prof. Tony (JCA) Davies: 28 August 1931–3 March 2024

Worker advocate, mentor, and an inspiration to many

Gill Nelson: University of the Witwatersrand, South Africa; MMPA honorary life member

It is with sadness that we share the news of the passing of Professor Emeritus Tony Davies after a short illness. Born in Scotland, schooled at St John's College in Johannesburg, and trained in medicine at Guy's Hospital in London, he moved to Zimbabwe (then Rhodesia) in 1958. There, he worked at Mpilo Hospital in Bulawayo, and later was stationed at Shangani from where he ran the public hospital and satellite rural clinics. In 1962, he moved to Gweru where he was appointed as the Provincial Medical Officer of Health (MOH) for Midlands Province. During this time, he developed a nationwide TB register, which enabled the discharge of inpatients back into their communities (he emptied the sanatoriums), and follow up and supply of treatment at local clinics. He was the first TB officer in Zimbabwe, and his interest in TB – both preventive and curative – continued throughout and beyond his career in occupational medicine. In 1974, he moved to Harare to take up the MOH position for Harare City.

Nine years later, in 1983, Tony moved to Johannesburg and was appointed as the Professor of Occupational Health at Wits (in a joint post with the Department of Health), and as the Director of the

Professor Emeritus Tony Davies

National Centre for Occupational Health (NCOH), now the National Institute for Occupational Health (NIOH) – a position he held until 1996, although he continued in an honorary position for a further 19 years until his retirement to Kenton-on-Sea in the Eastern Cape, with his wife, Deirdre, in 2015.

Tony's experience in mine occupational health led him to being selected as one of four members of the Commission of Inquiry into Safety and Health in the Mining Industry, headed by Judge Leon in the 1990s. Throughout his career, he supported many researchers to undertake research of neglected but pressing occupational health issues. He was an active player in investigations into several cases of worker exposure to hazardous substances, including the mercury contamination at Thor Chemicals in the 1990s. His work with asbestos miners contributed to the establishment of two trusts to compensate asbestos workers with disease and their dependants. Several of his many papers were published in the *Adler Museum Bulletin*, where he was the co-editor from 2005 to 2014.

Tony is survived by his wife, Deirdre, and their six children. 

Johann Beukes: 6 October 1941–11 March 2022

Deon Jansen van Vuuren: SAIOH General Manager

Almost two years have passed since Johann's death. In acknowledging the huge contribution that he made to the occupational hygiene profession in southern Africa, I was not sure if I should call this a tribute or an obituary. The words, 'gratitude' and 'admiration' came to mind, as did 'announcement of his death' and 'a short biography'. But let me not waste any more time on this – it is a mix of a tribute and an obituary.

Johann (JDR) Beukes was a giant of a man, not just in physical size, but also in his work and family – a true gentleman. In 2022, we notified you of his death by e-mail notification and in our newsletters. But I feel the need to acknowledge him and share something of this gentle giant or, rather, gentleman. His family summed it up accurately as a "life celebration".

Johann Beukes was our much-loved and admired friend and colleague, who sadly passed away on 11 March 2022. His knowledge of the industry and his many roles within the Southern African Institute for Occupational Hygiene (SAIOH) and its Professional Certification Committee (PCC) are well known. His positive attitude and desire to be of service to others, even during his darkest hours, touched

us all. On a personal level, we enjoyed his sense of humour, love of life and, above all, his deep love for his family and God.

I am not going to bore you with details of Johann's life, e.g. date and place of birth, where he grew up, schooling, etc. Let us rather celebrate the time we had with him.

Johann was not always the retired, elderly person we knew. He was extremely proud of being an occupational hygienist, and championed the profession in the mining industry and wherever else he worked.

Johann started his career in the old South African Railways and Harbours, after which he moved to the coal mines, specialising in ventilation. He was an active and proud member of the mines' proto rescue teams for almost 20 years, which entailed working in dangerous environments, and being exposed to serious life-

threatening situations. Names like Grootvlei, Springfield, and Arnot came up in our conversations. At Arnot, he was the Mine Manager until he joined the Department of Mineral Resources and Energy (DMRE), and then Multimesh. Eventually, he started his own occupational hygiene consultancy: Health and Occupational Hygiene Laboratories (HOHL).
